Profile

Hands-on machine learning engineer with end-to-end experience in robotics and 3D vision. **PhD research** centered on multi-view 3D reconstruction, sensor fusion, and deep learning for geometric perception. **Strong software engineering skills** across algorithms, application development, and data workflows; write clean, maintainable code and deliver reliably with testing and automation. **Full-stack developing experience** to move ideas from prototype to production. **Proactive engineer with an analytical mindset** who turns ambiguous problems into clear metrics, dashboards, and experiments, and communicates insights to guide data-driven decisions. **Passionate about using data and machine learning to deliver measurable improvements in business performance and user experience.**

Technical Skills	Soft Skills
• Languages: Python, JavaScript, C++, C# • GenAI: LLMs, Retrieval-Augmented Generation (RAG) • Machine Learning: PyTorch, TensorFlow, Scikit-learn • Data Visualization: Matplotlib, MATLAB, OpenCV, Open3D • Database: PostgreSQL, VectorDB • Full-stack Development: React Native, FastAPI • DevOp & Cloud: Git, Docker, Github Actions, Azure Apps	• Agile development • Ownership mindset • Learning agility • Problem solving • Coaching & mentoring • Analytical mindset • Business argument

Professional Experience

Software Engineer | CLCN Mar. 2025 – Now

Tech Stack: React Native, Github Actions, Figma

- Contribute to the front-end development of an internal ERP web app that creates a transparent, measurable collaboration framework and standardizes handoffs.
- Translate offline processes into configurable, step-based workflows with deadlines, reminders, document tracking, and clear UI flows/specs aligned with business and design.
- Build collaboration features around volunteer profiles and availability so organizers can assemble teams, send invitations, and coordinate tasks transparently.
- Instrument data capture for post-event reviews and training, laying the foundation for analytics-driven improvements and policy updates.

Machine Learning Engineer | SenseTime Sep. 2020 – Sep. 2021

Tech Stack: Python, PyTorch, OpenCV, NumPy, CUDA, Git

- Built an automated multi-sensor data pipeline for smartphone 3D capture – standardizing images, time-aligning IMU data, and extracting photometric features – to power downstream 3D reconstruction models at scale.
- Developed a deep-learning multi-view model to reduce reconstruction uncertainty, and enabled a post-deployment fine-tuning loop on user-returned images.
- Optimized inference efficiency by integrating classical 3D matching algorithms with deep

learning models, reducing computational load for mobile deployment.

- ♦ Delivered the solution as a modular Python package with clear docs and tests, and exposed a lightweight REST/HTTP wrapper to streamline integration with the mobile app and internal tooling, enabled downstream 3D-model-based features.

Computer Vision Engineer | BOE Technology

Sep. 2018 – Sep. 2019

Tech Stack: C++, OpenCV, MATLAB, ROS

- ♦ Coordinated cross-functional teams to develop a visual navigation system for autonomous cleaning robots, aligning perception, planning and hardware modules.
- ♦ Installed and calibrated stereo cameras and ancillary sensors, performing intrinsic/extrinsic calibration to achieve sub-millimetre pose accuracy.
- ♦ Implemented C++ modules for real-time sensor data acquisition and preprocessing, improving data reliability under varying lighting conditions, integrated into the commercial cleaning-robot line, improving reliability and overall operational efficiency.

Independent Developer | Household Inventory Management App

Mar. 2025 – Now

Tech Stack: React Native, FastAPI, PostgreSQL, Github Actions, Azure, OpenAI GPT-4, RAG, VectorDB

- ♦ Engineered a scalable full-stack solution with front end, back end and PostgreSQL persistence.
- ♦ Developed modular AI layers—embedding lookups, RAG pipelines and GPT-4 hooks.
- ♦ Automated CI/CD with GitHub Actions, deploying to Azure Functions & Static Web Apps.
- ♦ Used JIRA to manage the project roadmap and ensure agile development.

Education

Peking University | PhD in Artificial Intelligence

Beijing, China

School of Intelligence Science and Technology

Sep. 2016 – Jul. 2024

Kyushu University | Visiting Scholar Program

Fukuoka, Japan

Graduate School of Information Science and Electrical Engineering

Sep. 2018 – Mar. 2019

Peking University | BSc in Artificial Intelligence

Beijing, China

School of Electronic Engineering and Computer Science

Sep. 2012 – Jul. 2016

Research Achievements

Research Highlights

- ♦ Developed a disparity estimation network leveraging temporal correlation in structured light systems, reducing computing cost by about 50% for robotic vision applications.
- ♦ Pioneered the integration of neural implicit functions for structured light systems, enhancing depth estimation accuracy with minimal input patterns, and provide insightful research direction for structured light researches.
